Airbus Helicopters has released a new safety awareness video dedicated to mitigating the persistent risk of **cable collisions** during helicopter operations. This resource is specifically developed to support pilots operating across diverse flight environments, reinforcing best practices for operational safety.

The release of this awareness video is part of Airbus Helicopters' ongoing commitment to providing fleet customers and pilots with the most current and relevant safety resources. The video briefing is designed to be concise yet impactful, requiring only **eight minutes** to view, ensuring it can be quickly integrated into pilot safety reviews and briefings.

Focus on Real-World Experience

A key feature of this new briefing is the **candid testimony of a French pilot** who has previously experienced a cable collision incident. This firsthand account offers invaluable, actionable lessons and underscores the real-world stakes of this operational risk. The video provides focused insights on identifying cable threats, advanced visualization techniques, and essential flight planning strategies tailored to minimize risk during low-level and high-density flying. **Don't miss the powerful lessons shared through real-world experience.**

Availability and Access

The Cable Collision awareness video is already available to all Airbus Helicopters operators and pilots via the official [Airbus.com website](http://Airbus.com) (Tab E-learnings / Videos for Pilots).

Operators are strongly encouraged to share this essential resource with their entire fleet pilot population as part of their recurrent safety promotion and mission briefing processes.
